

A photograph of three young children sitting on a light-colored carpeted floor. From left to right: a young girl with dark skin and curly hair is holding a colorful pacifier; a young boy with dark skin and curly hair is holding a round, patterned cookie; and a young boy with light skin and straight hair is holding a small toy dinosaur. They are surrounded by various toys, including wooden blocks and a toy car. The background is a bright, out-of-focus indoor setting.

You never know  
where potentially  
serious diseases  
may be hanging  
around.

VACCINATE ON TIME. EVERY TIME.

Nunca se sabe dónde  
pueden acechar  
las enfermedades  
potencialmente  
graves.

VACUNE A TIEMPO. SIEMPRE.

## Dear Parent/Guardian,

You can help prevent potentially life-threatening childhood diseases—wherever they may be hiding—by making sure your child gets CDC-recommended vaccinations.

Records show that your child may have missed a vaccination.

### **Please contact your child's doctor to find out if you need to schedule an appointment.**

It's important to keep your child up to date on CDC-recommended vaccinations.

This postcard is being sent by your child's health plan, health clinic, or health department. Financial support for this communication has been provided by Pfizer Inc. No patient-identifiable information has been or will be provided to Pfizer.

## Did you know?

---

Should an outbreak happen, babies who haven't received all their immunization shots could be at higher risk of developing a disease that could lead to hospitalization, disability, or even death.

---

## Estimado padre o tutor:

Al asegurarse de que su hijo reciba las vacunas recomendadas por los CDC, puede ayudar a prevenir enfermedades infantiles potencialmente mortales, dondequiera que se escondan.

Los registros indican que posiblemente su hijo no haya recibido una vacuna.

### **Comuníquese con el médico de su hijo para averiguar si tiene que programar una cita.**

Es importante que su hijo esté al día con las vacunas recomendadas por los CDC.

## ¿Lo sabía?

---

Si hubiera un brote epidémico, los bebés que no hayan recibido todas las vacunas podrían correr un riesgo mayor de presentar una enfermedad que podría dar lugar a una hospitalización, una incapacidad o incluso la muerte.
